Summer Tune-up Internet Special

\$129

**SUPER 20 POINT
AIR CONDITIONING TUNE-UP**
NORMALLY \$189.00

PRECISION AIR CONDITIONING SYSTEM TUNE-UP BENEFITS:

- Lower utility bills by reducing energy consumption and waste.
- Extended equipment life.
- Peace of mind for you and your family.
- Fewer repairs, and improved system reliability.
- Increased cooling capacity and efficiency.

OUR EXCLUSIVE PRECISION AIR CONDITIONING SYSTEM TUNE-UP PROCEDURE INCLUDES, AS NEEDED:

1. TECHNICIAN will listen to your concerns regarding your home air conditioner and ductwork systems. We will diagnose and solve problems at your request. We will record make, model and serial number and enter into our data base for less expensive future repairs.
2. CONDENSER COIL shall be thoroughly hosed out and fins straightened for increased energy efficiency.
3. EVAPORATOR COIL will be inspected for cleanliness and damage. A clean evaporator coil will reduce energy bills and increase cooling efficiency.
4. MOTORS will be inspected, blown out, oiled and amperage draw verified. Clean motors will last much longer.
5. BLOWER WHEEL will be inspected for balance and cleanliness, advise homeowner if required.
6. AIR FILTERS standard air filters will be replaced at no extra charge. (Extra charge for specialty filters).
7. CONTROLS and SAFETIES will be inspected and tested for proper operation.
8. THERMOSTAT will be checked and calibrated as required for proper operation. Unit operation can be enhanced by a properly functioning thermostat.
9. REFRIGERANT CHARGE will be accurately checked and monitored to ensure proper operation.
10. CAPACITORS will be checked and tested for proper amp draw and leaks.
11. CONDENSATE DRAIN SYSTEM will be checked and cleaned out as needed. Plugged condensate can cause expensive water damage.
12. REFRIGERANT SERVICE VALVES will be tested for leaks and proper operation.
13. CONTACTORS and RELAYS will be thoroughly inspected for pitting and wear.
14. UNIT ELECTRICAL DISCONNECT will be inspected and all loose wires tightened.
15. AC UNIT WIRING will be inspected all loose wires and connections repaired.
16. COMPRESSOR will be inspected for proper amperage and overall working condition.
17. ALL TEMPERATURES and PRESSURES will be taken, tested and recorded for proper unit operation.
18. DUCTWORK will be tested for airflow problems, obvious leakage and static pressures. Bad ductwork will increase operating costs.
19. FURNACE or AIR HANDLER check and adjust fan and fan switch for proper settings and operation.
20. COMPLETE and PRESENT full written report, make any needed and necessary recommendations to homeowners.
